EXPERIMENT NO: 9

AI-ASSISTED FEATURES AND ZIA ANALYTICS IN ZOHO CREATOR LIBRARY BOOK ISSUE SYSTEM

AIM

To explore the AI-assisted features and analytics available in Zoho Creator for the Library Book Issue System, including querying library records, creating charts, and identifying patterns in book issues and returns.

OVERVIEW

Zoho Creator provides analytics and, where available for the application and plan, Zia AI features that can help users explore application data. In a Library Book Issue System, library records such as book titles, member details, issue dates, due dates, return dates, and issue status can be used to prepare reports and dashboards. These insights can help a librarian monitor popular books, active issues, overdue books, and issue trends.

FEATURES / CAPABILITIES

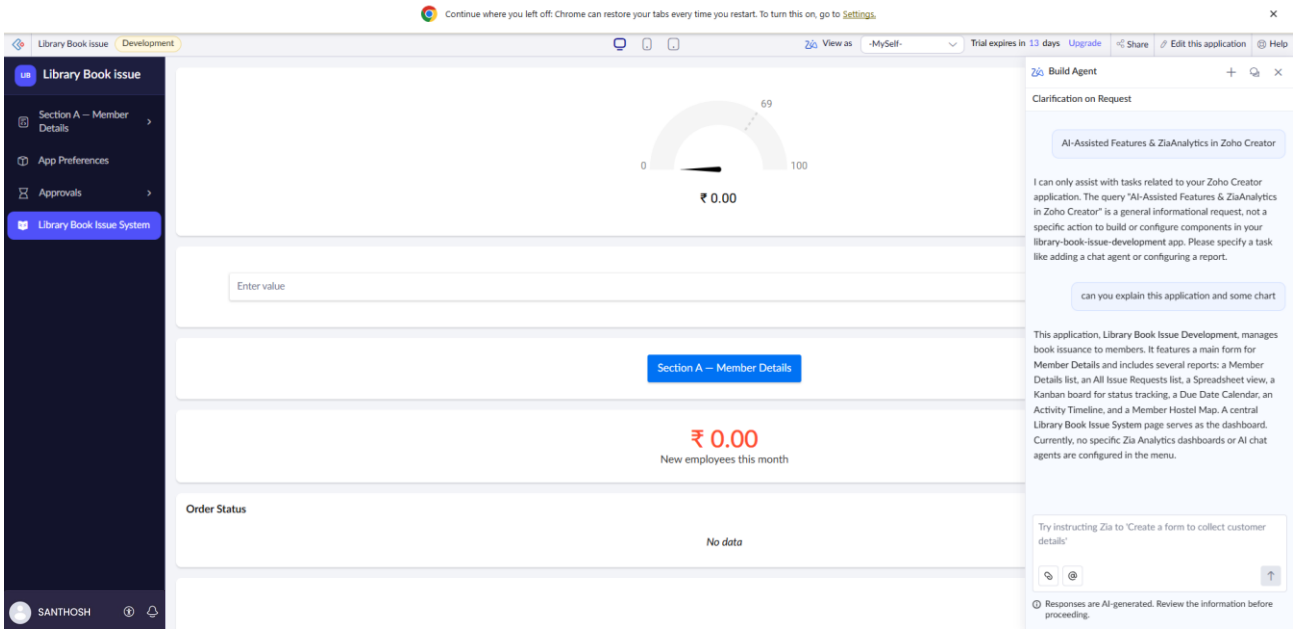

Feature	Application in Library Book Issue System
Zia Voice & Chat	Where enabled, use natural-language prompts to explore book issue records, such as asking for a summary of active issues.
Smart Analytics	Create charts or reports showing books issued by month, issue counts by book title, or issue status.
Anomaly / Pattern Detection	Review unusual patterns, such as a sudden increase in overdue books or repeated delays in returning books. Availability of automatic detection depends on the features enabled in the account.

PROCEDURE

1. **Open the Application:** Log in to Zoho Creator and open the *Library Book Issue System* application.
2. **Check the Data Form:** Ensure the application contains relevant fields such as Book Title, Book ID, Member Name or ID, Issue Date, Due Date, Return Date, and Issue Status.
3. **Open Analytics and Reports:** Navigate to the report or analytics area available in your Zoho Creator workspace and select the book issue records.
4. **Create Library Reports:** Prepare reports such as total books issued, issues grouped by month, issue status counts, and overdue books based on due date and return status.
5. **Use Zia, if Available:** If Zia or natural-language analytics is enabled for your account, try a prompt such as “Show the number of books issued each month as a bar chart” or “Summarize books that are currently overdue.”

6 **Review Insights:** Examine the generated charts and reports to identify popular books, monthly issue trends, and overdue records. Save the report or dashboard for future use.

SCREENSHOTS

RESULT

The Library Book Issue System was adapted to use Zoho Creator reports and analytics for reviewing book issue and return records. Charts and reports can help the librarian monitor issue trends and overdue books. Zia-based natural-language insights can also be used if the feature is available and enabled in the Zoho Creator account.
