Experiment: Library Book Issue System – Zoho Creator Reports Suite

Aim:

To design and build a complete suite of reports in Zoho Creator for the **Library Book Issue System**, demonstrating the use of nine report types to manage book details, member information, issue records, due dates, returns, and library activity.

Reports Used Overview

Report Type	Report Name
List View	Book_Issue_Register
Spreadsheet View	Book_Issue_Spreadsheet
Kanban View	Issue_Status_Kanban
Calendar View	Due_Date_Return_Calendar
Map View	Library_Member_Location_Map
Timeline View	Book_Issue_Activity_Timeline
Pivot Table	Books_By_Category_and_Status_Pivot
Chart View	Book_Issue_Distribution_Chart
Summary View	Library_Issue_Summary

Detailed Report Descriptions

1. Book_Issue_Register (List View)

Purpose: Acts as the main register for librarians to view all book issue transactions in one searchable table.

Features: Displays Issue ID, Book Title, Book ID, Member Name, Member ID, Issue Date, Due Date, Return Date, and Issue Status. Search, sorting, and filters help staff find records quickly.

2. Book_Issue_Spreadsheet (Spreadsheet View)

Purpose: Helps librarians review and update issue and return records in a grid format.

Features: Supports quick editing of permitted fields such as Return Date and Issue Status, while important book and member identifiers can be kept read-only to protect record accuracy.

3. Issue_Status_Kanban (Kanban View)

Purpose: Shows book issue transactions grouped by their current status.

Features: Cards can be grouped into statuses such as Issued, Returned, Overdue, and Lost/Damaged. Moving a card between columns can update the status field when configured in Zoho Creator.

4. Due_Date_Return_Calendar (Calendar View)

Purpose: Helps librarians monitor upcoming due dates and plan return follow-ups.

Features: Calendar entries use Due Date or Expected Return Date to show books that are due today, due soon, or overdue. Monthly, weekly, or daily views support scheduling.

5. Library_Member_Location_Map (Map View)

Purpose: Displays member locations geographically when address or location information is collected and mapped.

Features: Location pins can help visualize member distribution for library service planning. This report requires a suitable address/location field and map configuration; it is optional if the system does not store member locations.

6. Book_Issue_Activity_Timeline (Timeline View)

Purpose: Presents issue and return activity chronologically.

Features: Shows relevant dates such as book issue, renewal, and return events, helping librarians review transaction history and identify periods of high circulation.

7. Books_By_Category_and_Status_Pivot (Pivot Table)

Purpose: Summarizes circulation records by book category and issue status.

Features: Rows can represent book categories, columns can represent statuses such as Issued, Returned, and Overdue, and values can count issue records for a quick comparison.

8. Book_Issue_Distribution_Chart (Chart View)

Purpose: Visually compares book circulation and issue status across the library collection.

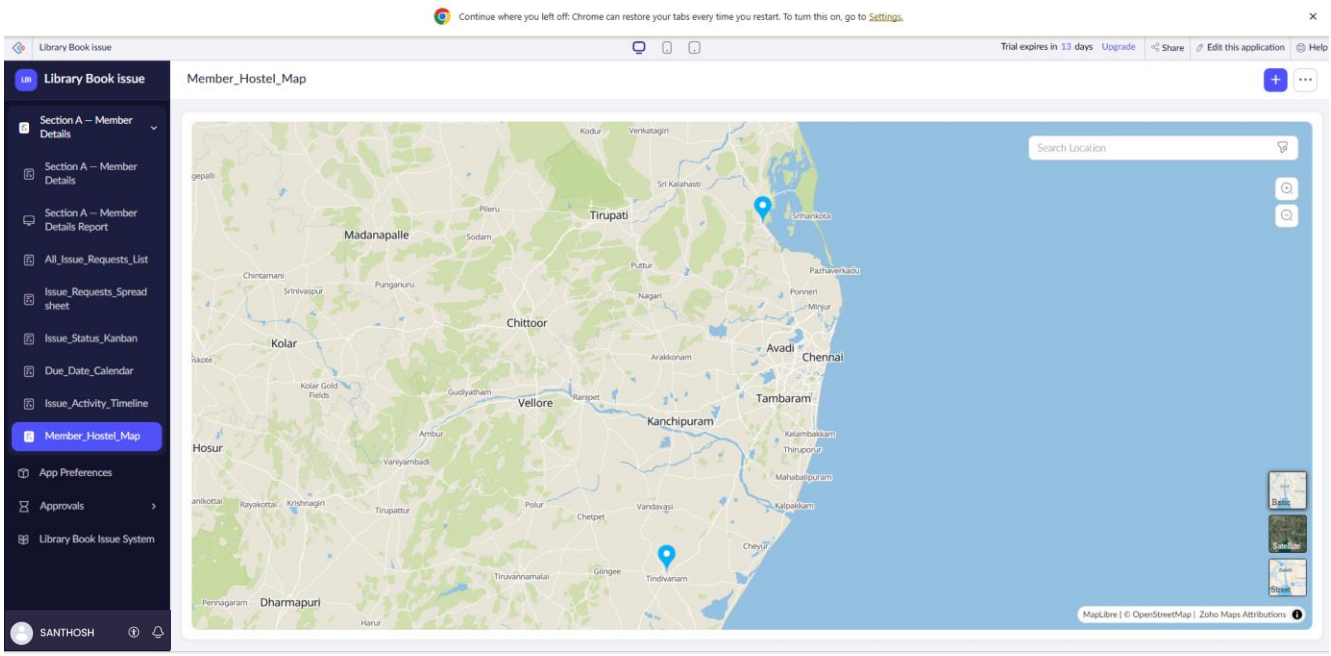

Features: Charts can show the number of books issued by category, the split between issued and returned books, or monthly issue counts. Filters can be used to focus on a date range or category.

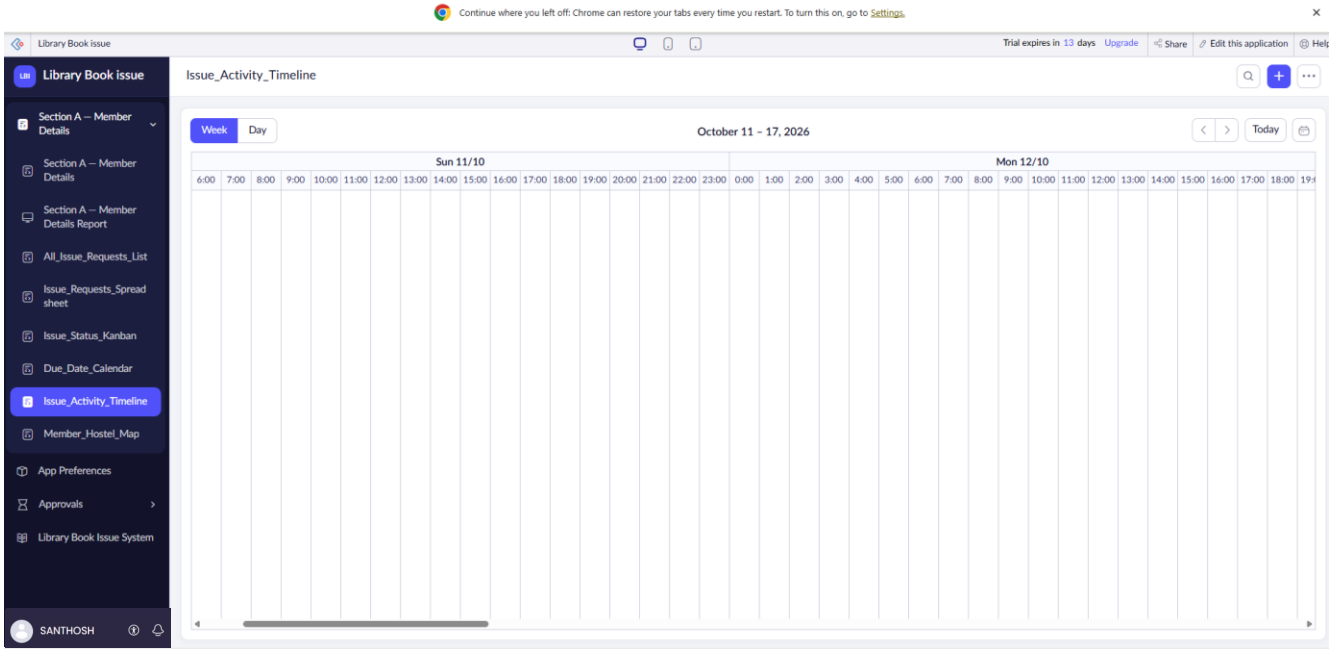

9. Library_Issue_Summary (Summary View)

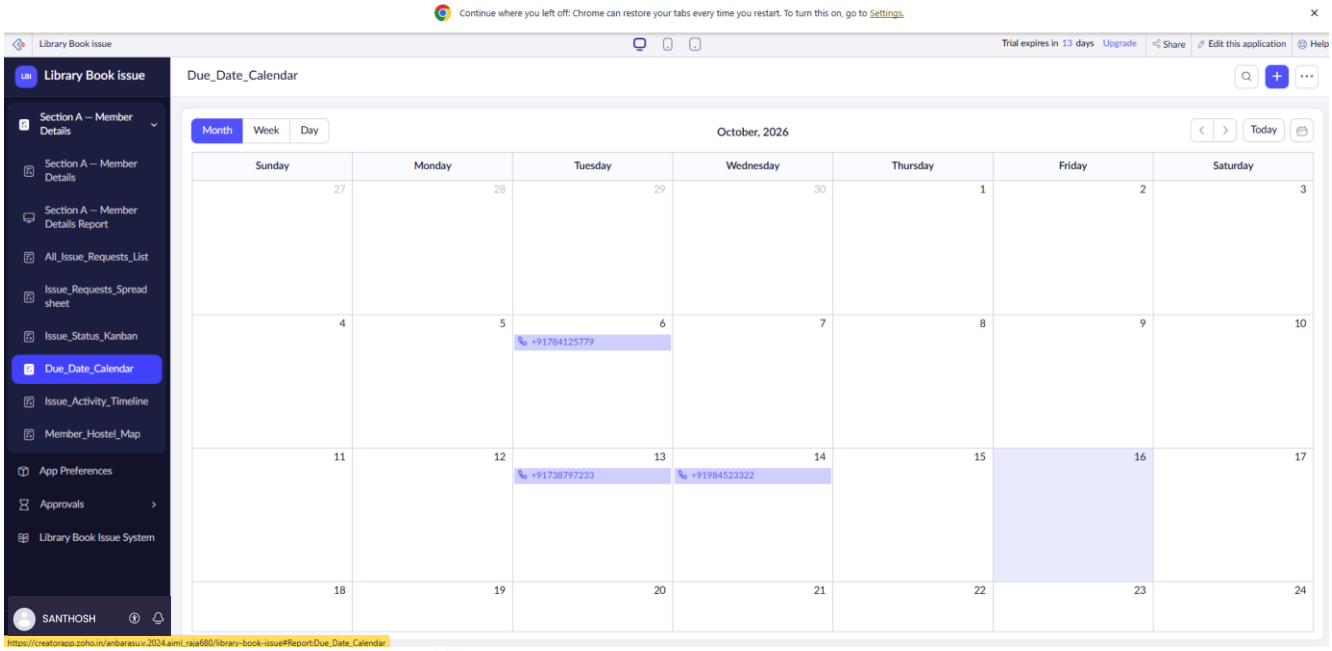

Purpose: Provides a concise overview of library circulation for the librarian or administrator.

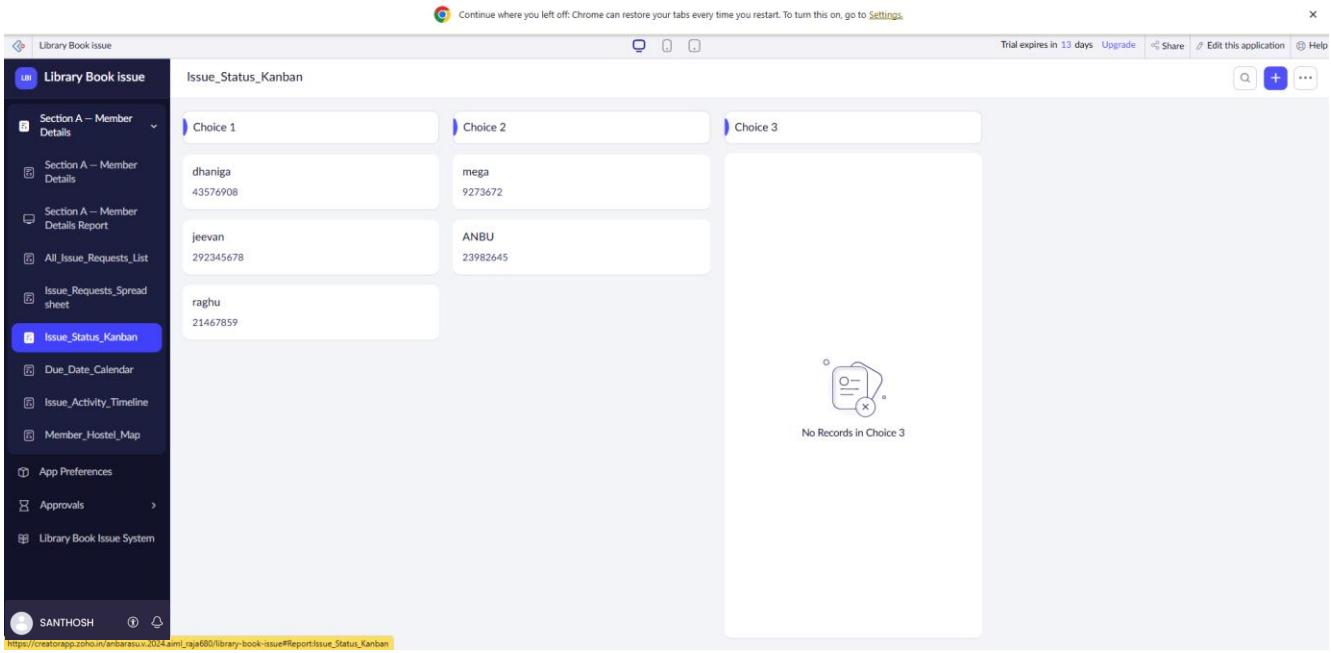

Features: Summarizes total issue records, currently issued books, returned books, overdue books, and category-wise counts, depending on the fields and aggregations configured.

Result

A suite of nine reports for the Library Book Issue System has been designed and documented. These reports support tracking of book issue and return transactions, monitoring due dates, reviewing issue status, and summarizing library circulation. The reports can be configured and verified in Zoho Creator according to the fields available in the application.
